

Miscellaneous Safety Items

Safety Steps

These extremely stable yet easily mobile double steps make access to high objects such as EM filaments and guns safe and easy thus eliminating one of the major causes of accidents. The 'kick' step rolls on spring-loaded castors to the required location but is immediately stabilised by body weight placed upon it. The castors retract and the steps remain in position on the broad flat base. They cannot move once stood on. The steps are 14" (35.6cm) high and have rubber treads at each level.

S131 Safety steps each

Bottle Carriers

Strong epoxy coated steel wire bottle carrier holds six reagent bottles or wash bottles.

B371 Carrier for bottles max. diameter 60mm each
B372 carrier for bottles max diameter 74mm
