10 SEM, TEM, STM Supplies

SEM Specimen/Stub Adhesives

A listing of many different adhesive methods for attaching specimens to SEM mounts.

**Colloidal Graphite**

A suspension of pure, fine colloidal graphite in water or in isopropanol based solution. To form a conducting dry film of graphite on a variety of materials.

- C107  Colloidal graphite - aqueous base  500g
- C126  Colloidal graphite - isopropanol base  500g

**Silver Paint**

An air drying paint containing silver flakes. Dries to form a conducting film that is ideal for sample mounting.

- S269  Silver paint  10g
- S270  Silver paint  50g

**Silver Paint Thinners**

A thinner to reduce the thickness of our silver paint S066 to make thin conductive tracks on the specimen for microprobe work.

- S271/1  Silver Paint Thinners  25ml
- S271  Silver paint thinners  100ml

**Silver Epoxy Adhesive**

A two part silver filled epoxy adhesive providing a conducting joint and bond. Silver content 70%. Information sheet provided with each pack.

- S055  Silver epoxy adhesive pack of 10g

**Conducting Carbon Cement (Leit-C)**

A suspension of very fine carbon particles in a volatile carrier. Suitable for forming a conducting film bond between specimen or carbon disc to stub.

- C198  Carbon cement (Leit-C)  30g
- C198/1  Thinners for Leit-C  30ml

**Leit-C Plast**

A plasticine like material with low outgassing properties suitable for use in the high vacuum of the SEM. Leit-C Plast is a conductive material requiring no additional coating and is suitable for many applications in specimen preparation.

- C199  Leit-C-Plast  15g

**Tempfix**

A thermoplastic adhesive that when applied to a heated stub at approximately +40°C yields a sticky surface suitable for holding specimens. It dries quickly to a very smooth surface and remains stable under the SEM.

- T328  Tempfix  set

**Microstik**

A clear adhesive for mounting small particles. Provides an ultrathin base when applied to the SEM specimen mount. Dries quickly and is non-conductive.

- M167  Microstik solution  14ml
**Conducting Film Aerosol**

A rapid method of spraying a conductive film onto SEM specimens such as pieces of biological tissue. Effects are not permanent so it is ideal for rapid examination in the SEM.

- **C212** Conducting film aerosol 397ml can

**Carbon Discs**

A range of discs 3mm thick with diameters of 12.5mm, 15mm or 25mm for mounting specimens in the SEM.

- **C304/10** Carbon discs 12.5mm Ø pack of 10
- **C305/10** Carbon discs 15mm Ø pack of 10
- **C306/10** Carbon discs 25mm Ø pack of 10

**Conductive Carbon Adhesive Discs**

For SEM stubs. An improvement on double sided tape. These new doubly adhesive carbon based discs ensure good electrical connection whilst retaining the benefits of a quick mounting method.

- **C263/N** 9mm Ø pack of 100
- **C249/N** 12mm Ø pack of 100
- **C252/N** 25mm Ø pack of 51

**Sulphur-Free Conductive Carbon Discs**

Adhesive discs with low background for microanalysis

- **C272** Sulphur-free conductive carbon tabs 12mm Ø pack of 120

**Double Sided Sticky Carbon Tape**

Highly conductive tape for SEM and EDS applications. The double adhesive and conductive design permits quick mounting of samples without using liquid or colloidal adhesives. The tape is relatively solid and non-porous and does not absorb small samples. Thickness is 0.16mm.

- **C261** Carbon tape 8mm x 20m long each
- **C277** Carbon tape 12mm x 20m long each
- **CXXX** Carbon tape 20mm x 20m long each
- **C278** Carbon tape 50mm x 20m long each

**Conductive Carbon Adhesive Sheet**

For SEM or EDS we have available double sided carbon sheet for eliminating background X-rays. When cut to size it is easy to place on SEM stubs and is contaminant free.

- **C206** Carbon conductive adhesive sheet 5 x 12cm pack of 10

**Sticky Tabs**

Sticky tabs maybe affixed to most types of stubs. Once affixed to the top of a stub simply remove the peel-off tab to leave a ½” (12.7mm) Ø layer of adhesive to which small specimens can be fixed, or impressions such as fingerprints can be made in the adhesive for examination. Non conducting and the strong silicone adhesive does not outgas in the vacuum. The adhesive can be removed with acetone.

- **T199** Sticky tabs pack of 100
SEM, TEM, STM Supplies

**Copper SEM Tape**

*Single sided* highly conductive copper strip with pressure sensitive adhesive backing. Ideal for static charging problems using SEM/FIB applications. 30 metre rolls. Total tape thickness 0.06mm

**Silver Conducting Adhesive Sheet**

Highly electrically conductive sheet 5 x 12 x 0.16cm thick suitable for cutting and sizing to samples for SEM.

- Little outgassing under vacuum
- Doesn’t absorb or penetrate specimens

**Silicon Chip Specimen Supports**

Si-chips are opaque, of low electrical resistance and have surface properties equal to glass. They are chemically inert and make good substrates for growing or mounting cells or ferritin particles. They are useful for determining resolution and contrast capabilities of the “in-the-lens” SEMs equipped with high brightness electron emitters. Si-chips are precleaned before packing.

High Purity Conductive Double-Sided Adhesive Carbon Tabs

These high purity carbon tabs are especially developed for SEM/EDS applications. The material used is fully transparent for EDS with only trace amounts of Al and Si. The material is constructed using a non-woven liner coated on both sides with a conductive, carbon filled pressure sensitive acrylic adhesive. Total thickness of the material is approximately 150µm with an adhesive thickness of 45µm on both sides. The adhesive used has a high adhesion strength to metals, plastics, ceramics, wafers, rubber, wood, glass, paper, and small particles or fibres. The conductivity of the carbon tabs is lower than the conductivity of double sided copper tape or the double sided conductive Lift-N-Press tabs, but it is still fully compatible with SEM/EDS applications. Ideal for Gunshot Residue work.

Main Features and Benefits

- Thin material; 150µm total with 45µm on each side of a 35µm non-woven carrier
- Plastic liner on both sides
- Useable temperature range -20°C to + 60°C
- Low outgassing rates
- Fully EDS transparent with high purity for EDS applications
- High strength thin adhesive (2x45µm) combined with high tackiness
- Long shelf life and can be stored in a refrigerator
- Resistance 50K-200K

The tabs are supplied on a clear plastic sheet with a white plastic liner tab. Available as 6mm, 9mm, 12mm and 25mm diameter.

To use, lift the tab from the clear backing sheet, press the sticky surface to the mount, then peel away the white liner tab, leaving the adhesive exposed. Mount the sample on the exposed adhesive. Alternatively, the white liner tab can be removed, the stub pressed on the exposed carbon tab and the clear plastic lifted off. The use of sharp pointed tweezers helps to lift of the tabs and liner. The carbon tabs can be easily removed with isopropanol, ethyl acetate, ethanol or acetone.

The 6mm Ø carbon tabs are for use with small samples on any size stub.

The 9mm Ø carbon tabs are compatible with 9.5mm Ø JEOL stubs
The 12mm Ø carbon tabs are compatible with 12.7mm Ø pin stubs, 12.2mm Ø JEOL stubs and 15mm Ø Hitachi stubs
The 25mm Ø carbon tabs are compatible with 25.4mm Ø pin stubs, 25mm Ø JEOL stubs and 25mm Ø Hitachi stubs

C429 High purity conductive double-sided adhesive carbon tabs 6mm Ø pack of 108
C430 High purity conductive double-sided adhesive carbon tabs 9mm Ø pack of 104
C431 High purity conductive double-sided adhesive carbon tabs 12mm Ø pack of 100
C432 High purity conductive double-sided adhesive carbon tabs 25mm Ø pack of 50
Super Smooth Conductive Double Sided Adhesive Carbon Discs

High Purity tabs developed for imaging and analysis applications of particularly fine powder and fibre samples. The adhesive used is fully transparent for EDS analysis with only trace amounts of Al and Si. **Super smooth and highly conductive.** Total thickness of the material is 110µm with an adhesive thickness of 40µm on each side. Exhibits high adhesion to metals, plastics, ceramics, wafers, rubber, wood, glass, paper and small particles or fibres. Supplied on a clear plastic sheet with a white plastic liner tab.

- Low outgassing
- Temp range –20°C to +60°C
- Long shelf life and can be stored in a refrigerator

To use: lift the tab of the clear backing sheet, press the sticky surface to the mount, then peel away the white liner tab, leaving the adhesive exposed. Mount the sample on the exposed adhesive. Alternatively, the white liner tab can be removed, the stub pressed on the exposed carbon tab and the clear plastic lifted off. The use of sharp pointed tweezers helps to lift off the tabs and liner. The carbon tabs are easily removed with isopropanol, ethyl acetate, ethanol or acetone.

C433 12mm carbon tabs are compatible with 12.7mm Ø pin stubs, 12.2mm Ø JEOL stubs and Ø15mm Hitachi stubs. Pack of 100

C434 24mm Ø carbon tabs are compatible with 25.4mm Ø pin stubs, 25mm Ø JEOL stubs and 25mm Ø Hitachi stubs. Pack of 50

Conductive Carbon Adhesive Discs

Conductive carbon adhesive tabs approximately 12.5mm diameter with a thin film of strong adhesive. Over 99% transparent to EDS with very small amounts of nickel (0.6%) and copper (<0.3%). For small samples, tabs can be cut to the desired size before removing the tab from the backing sheet.

C445 Conductive carbon adhesive discs Roll of 250

Super Smooth Double Sided Adhesive Carbon Tapes

The material is identical to the material used for the super smooth carbon tabs with one difference; the tapes are self-wound with a thin white liner on one side. The tape can be shaped into custom forms, strips and cut-outs. Available with 5mm, 8mm, 12mm and 20mm width by 20m long. To use: Cut the required length of carbon tape. Cut to shape if needed. Remove the white liner from one side and adhere to tape to the sample support. The use of sharp pointed tweezers helps to lift the liner of the adhesive. Remove the top liner and stick sample to the tape. The carbon tape can be removed with isopropanol, ethyl acetate, ethanol or acetone.

C435 Super smooth conductive double sided adhesive carbon tape 5mm x 20m
C436 Super smooth conductive double sided adhesive carbon tape 8mm x 20m
C437 Super smooth conductive double sided adhesive carbon tape 12mm x 20m
C438 Super smooth conductive double sided adhesive carbon tape 20mm x 20m
Non-conductive double sided tabs are useful for AFM, LM and SEM applications where conductivity is not a requirement. We offer two types:

1) **C679** Lift-N-Press premium adhesive tabs 12.5mm Ø with a thin film of strong adhesive. To use simply lift the tab off the backing sheet, press the sticky surface to the mount and peel back the tag. The adhesive can be removed with isopropyl alcohol or acetone. Compatible with 12 and 15mm Ø AFM discs, 12mm mica discs, 12.7mm pin stubs, 12.2mm JEOL stubs and 15mm Hitachi stubs. Pack of 100.

- These stubs have a super-strength thin adhesive (50µm)
- Smoother surface for better particle adhesion
- Lower outgassing and longer shelf life

2) **C680** D12 economy 12mm Ø adhesive non-conductive tabs, effective and cost efficient. To use, lift the protective tab to lift off the sheet and press onto sample stub. Compatible with 12 and 15mm Ø AFM discs, 12mm mica discs, 12.7mm pin stubs, 12.2mm JEOL stubs and 15mm Hitachi stubs. Pack of 100.
